Why do we exist? Why is there something rather than nothing? Designed to Evolve examines the question of existence in light of modern science. From the birth of the universe 13.8 billion years ago, to the intricacy of the DNA molecule, nature is explored at the most fundamental level. Two possible explanations emerge. Are we the result of chance or designed for a purpose? There has never been a time when more information on origins has been available. Now we can probe this question and take a critical look at the nature of existence. In the end, the evidence for purpose prevails. In this book big bang cosmology, particle physics, natural history, and biology are analyzed in a vivid chronology of the universe, revealing the beauty of creation and making the sciences of origin comprehensible to the non-scientist. Designed to Evolve presents a compelling depiction of creation that is supported by modern science.
