Today the high redshift galaxies have developed into one of the important topics of astrophysics, accounting for about 5-10% of the publications in the major scientific journals devoted to astronomy. Because high-redshift galaxies is a rapidly developing field and since new results are published constantly, writing a book on this topic is challenging. On the other hand, in view of the large amount of individual results now in the literature, and in view of the still growing interest in this topic, it appears worthwhile to summarize and evaluate the available data and to provide an introduction for those who wish to enter this field, or who, for various reasons, might be interested in its results.
